CEDAR provides a versatile tool that associates metadata with ontology terms from the BioPortal ontology repository. Members of the AIRR community developed an AIRR metadata specification and a set of templates for NCBI's BioProject, BioSample, and SRA repositories.

CEDAR is supported by the National Institutes of Health through the NIH Big Data to Knowledge program grant. (Grant Number 1U54AI117925)

CAIRR Workflow

The CEDAR Workbench offers web services enabling easy metadata model creation and submission of biomedical metadata.

Use REST APIs to create, share, and submit quality metadata resources

Use the CEDAR Workbench for free! Review the source code in GitHub (metadatcenter project).

And track our progress in Waffle!
